

# Move by Silent Gliss

QUIET PERFORMANCE. INTELLIGENT CONTROL.

Silent Gliss has been at the forefront of motorised Curtain and Blind technology for more than 60 years. As pioneers of the first direct-drive Motorised Track, their systems remain the benchmark for whisper-quiet, smooth and reliable operation. Whether integrated into a control system or operated via App, Switch or Remote, Silent Gliss solutions deliver precision and refined performance across both residential and commercial spaces.

With the upgraded 433MHz Receiver, Silent Gliss now offers full bidirectional feedback when paired with the Move by Silent Gliss Hub and App. This provides enhanced responsiveness, real-time position updates and seamless control through iOS and Android. The Move Smart Home Hub centralises all Motorised Curtains and Blinds, allowing you to manage products from anywhere and create personalised scenes that complement your lifestyle. Group Blinds and Curtains by room, automate routines, and connect shading with lighting or audio for a fully integrated experience.
